

Product Overview

European Waterborne Products Report

Features

- Weekly commentary and analysis provides insights into observations of key trends and events
- A comparison of net cargo flow measurements vs. Woodmac's proprietary storage data in ARA foreshadows the following week's storage report
- Data on refined product flows from the ARA and Baltic regions to key Trans-Atlantic terminals
- An overview of future distillates and gasoline deliveries by country
- Data on flows to WAF broken out by type

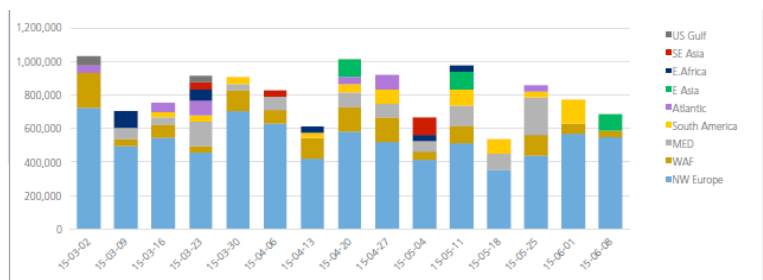

GO/ULSD Flows from ARA & Baltic by berth departure week

Gain a more global picture of key refined products flows across Europe and the Atlantic with weekly data and analysis

For anyone with exposure to the refined products markets, it is essential to have an accurate, up-to-date view of waterborne movements across the globe. Woodmac's combination of industry expertise, AIS Satellite data, and proprietary storage data enables us to provide a comprehensive weekly report of flows, broken down by refined product type and load or delivery port.

Woodmac's weekly European Waterborne Refined Products Report illuminates the flows in and out of Europe and the Baltic so that traders and analysts can better gauge global refined product markets.

The report is produced using Woodmac VesselTracker data, which boasts the most comprehensive and accurate data feed of global shipping, in order to follow cargoes loading in Europe and the Baltic to their final destinations. By carefully monitoring each vessel using AIS Satellite technology, Woodmac is able to accurately estimate true volumes of refined product flows to their final destination.

The weekly European Waterborne Products Report provides gasoil and diesel flows from the ARA and Baltic to numerous destination countries

Benefits

- Find efficiency and cost savings with this comprehensive weekly dataset and report
- Utilize Woodmac's breadth of proprietary data and trusted market intelligence to understand the activity of refined products across global markets
- Support investment and trading decisions in refined products markets across the globe
- Leverage Woodmac's proprietary, weekly measured ARA storage data
- Get a more accurate review of clean product flows to and from Europe

Designed for you

Traders

Access the tools to forecast trends of ARA gasoil/ULSD storage levels before they are published, to help you stay ahead of the competition. Leverage our data to monitor domestic loadings, including exports with ship names, volumes carried and destination information, to discover new pricing insights.

Analysts

Uncover market trends intelligence you can't get elsewhere with extensive data that informs your analysis and streamlines your workflow. We give you the discharge data and destination for key refined products including fuel oil, gasoil and ULSD, gasoline, mogas, jet fuel and more. Our product tanker tracking lets you forecast trends of ARA gasoil/ULSD storage levels before they're published.

Transportation & Shipping Professionals

Access critical information on bids, offers, and transactions for deliveries, helping you to strengthen operations and make more informed decisions. Use this data to identify new developments and stay informed on ever-changing market dynamics.
