

Product Overview

Russia Waterborne Crude Service

Features:

- Weekly export data; We leverage our VesselTracker data to provide an accurate weekly data feed of Russian crude exports.
- Extensive regional coverage: Loadings tracked from key regional ports, including; De Kastrî, Kalingrad, Kozmino, Murmansk, Novorossiysk, Prigorodnoye, Primorsk and Ust Luga.
- Ship-to-ship transfers captured from key loading locations off Skagen, Malta, South Korea and more discreet locations.
- Extensive crude coverage: Russian export crude blends covered include - Arco, Condensate, ESPO, Kaliningrad, Novy Port, Sakhalin Blend, Siberian Light, Sokol, Urals and Varandey.
- Coverage of non-Russian crudes loading at Russian ports - including Azeri Light, CPC, Kirkuk Blend, Kurdish blend.
- Fully benchmarked crude exports data against monthly loading schedules and known pipeline flows to ensure data accuracy and consistency.

An accurate, up-to-date view of Russia waterborne crude movements to and from destinations across the globe

With our Russia Waterborne Crude Report, track the latest tanker movements of Russian crude exports. Get transparency into weekly load volumes, impact of reduced flows into Europe, trade flow changes and location of distressed cargos awaiting orders.

Analysis of our waterborne data can be used as a leading indicator for changes to Russian upstream supply volumes in the absence of monthly Russian Ministry data.

The combination of our industry expertise, terrestrial and satellite data, and Wood Mackenzie VesselTracker's AIS network allows us to offer a comprehensive weekly view of Russia waterborne crude flows.

Use our research to understand key supply volumes of marketed grades and assess how changes to trade flows will influence the pricing and value of Russian crude streams.

Benefits:

- Evaluate weekly exports by grade, load and discharge location and track destination changes
- Assess changes to trade flows and how this will influence the pricing and value of Russian crude streams
- Gain an independent view on how exports of different grades are changing to help identify market opportunities
- Understand key supply volumes of marketed grades to use for trading decisions and tactical asset optimisation
