

Product Overview

US Crude Oil Production Forecast

The most detailed, accurate 5-year U.S. crude oil production forecast in the industry

Features:

- Detailed oil production forecasts (50+ regional forecasts in the U.S.)
- Crude oil forecast by quality (Heavy, Intermediate, Light and Condensate forecast)
- Drilling rig activity forecasts
- Timely forecasts integrated to forward oil and gas prices and rig counts allow price signals to flow through the models for quick adjustments to the forecasts based on market changes

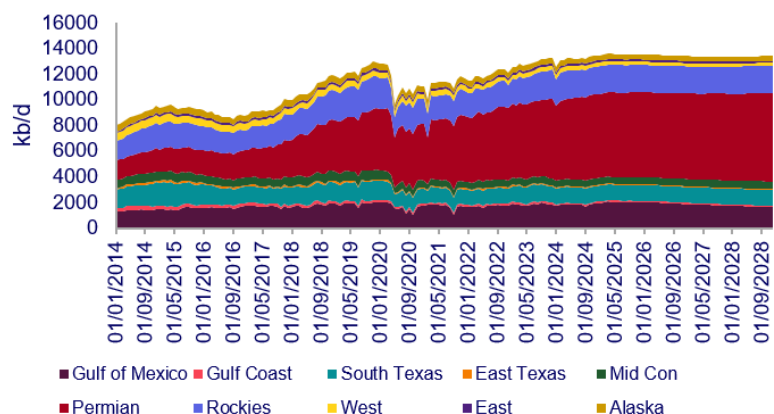

Understand the entire crude production landscape with proprietary data from 20,000+ individual wells, aggregated by basin and crude quality. We use a detailed, bottoms-up approach to deliver a monthly production forecast.

Woodmac's in-the-field monitors provide exceptional accuracy and advance notice of market fundamentals. Our analysts combine this data with our highly accurate real-time production data, tie it to current prices, and deliver a 5-year production. The report service provides data aggregated by region ((Permian, Bakken, Utica, Eagle Ford and Niobrara, etc) and by crude quality (heavy, intermediate, light & condensate).

Benefits:

- Accurate production forecasts will provide primary insight into supply/demand (storage) balances and resultant market prices
- Improve your degree of insight into future production; identify where production will be coming on line and how much production there will be
- Make more informed, confident decisions using Woodmac's comprehensive, highly dynamic production forecast
- Unlimited direct access to highly skilled and qualified analysts

US Crude Oil Production Forecast

Deliverables:

- Daily: Estimates of US production by region back to 2010 divided into 8 regions and 12 Gulf of Mexico sub-regions.
- Weekly: Rig Analysis Report detailing rig activity in the U.S. for the week
- Weekly: Price and Rig Change Effect on Production Forecast report provides updates to how rigs are actualizing and how prices movements are affecting our forecast.
- Weekly: U.S. Crude Oil Production and Pipe Flow Analysis Report summarizes week-over-week production swings and evaluates month-to-date production averages vs forecast.
- Monthly: EIA Monthly Comparison Report compares EIA monthly crude data to Woodmac's forecast
- Every 6 weeks: Detailed 5-year production forecast with expert analysis on risks and implications.
- Quarterly: Condensed, easy-to-read Quarterly Earning Conference Call Notes from over 150 E&P, refinery, and pipeline companies. Breakeven economics by play and key producer insights.

Designed for you Traders

Make efficient, smart decisions with data compiled and analysed on the growing US crude oil market.

Analysts

Our accurate production forecasts provide primary insight into supply and demand balances and resulting market prices.
