

## Product Overview

# European Pipeline Monitoring Service

### Features:

- Get real-time alerts and half-hourly flow updates by pipeline
- Analyse pipeline flow data connected to refineries in Western Europe

### Benefits:

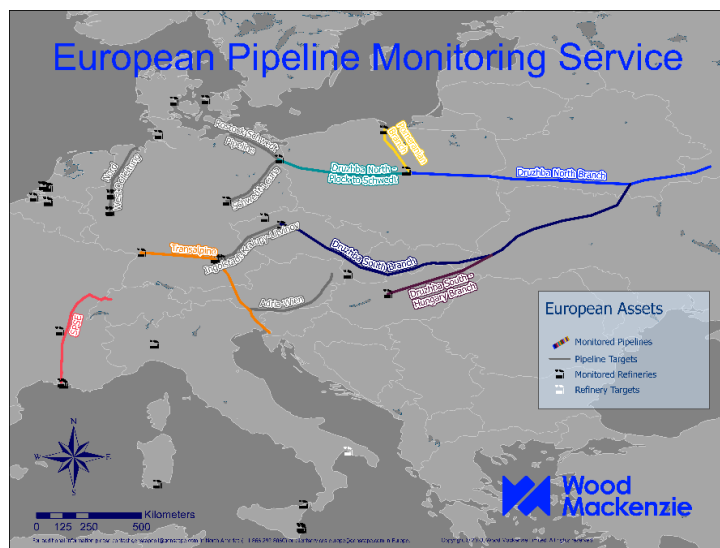

- Be the first to react to market moving events
- Use comprehensive flow data as a leading-edge indicator for refinery throughput and refined product yields
- Combine with our European Refinery Intelligence Service to understand the complete picture of European refinery operations and their respective feedstocks

## Real-time alerts and half-hourly flows for European crude oil pipelines

With a coverage of more than 80% of long-haul pipeline capacity in Western Europe, you can get an unparalleled view of critical oil pipeline flows serving key refining areas in Western Europe, including the Druzhba system.

Be the first to know about major pipeline shutdowns, start-ups, and flow changes. Our service monitors real-time flows on critical crude oil pipelines supplying and servicing key refineries. Use our comprehensive coverage to create granular supply and demand models, with added insight into refinery operations via specific pipeline feedstock data.

Wood Mackenzie uses proprietary electromagnetic field (EMF) technology to monitor pipeline flows. This is the same proven strategy and patented technology that Wood Mackenzie has used to monitor power plants and transmission lines since 2002.

## Designed for you

### Traders

Time is of the essence in a fast-moving, sensitive market. Optimise your trading strategies with access to our real-time information on crude oil trade routes.

### Analysts

Inform models with accurate, real-time flow data. Populate supply and demand balances with live data instead of lagged government data.
