

Product Overview

Mid-Continent Pipeline Service

Features:

- Daily Mid-Continent Pipeline PDF report, emailed at 8:30am ET, providing summary information of the previous day's pipeline flows and alert history
- Pipeline Intelligence reports sent via email as events on the ground warrant an update, including expert commentary, granular data, and supplementary images
- Half-hourly updates in Woodmac's pipeline flow dashboard for flows on more than two dozen critical pipelines supplying storage hubs and refineries
- Downloadable pipeline data in 30 minute, daily, weekly, and monthly increments.

Benefits:

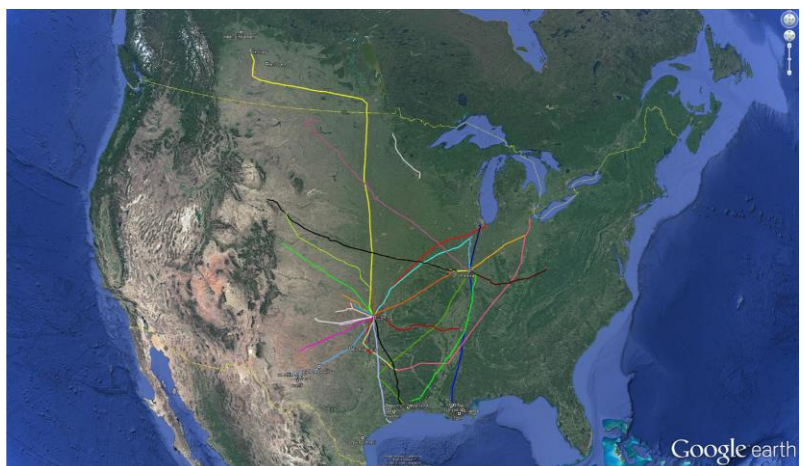

- Calculate implied storage numbers for the key crude oil storage facilities in the United States
- Identify operational supply chain impacts and refinery operational changes when you know where and when oil flow is slowing, picking up, or halted
- Make more informed trading decisions with near-real-time pipeline flow updates, unavailable anywhere else
- Feed internal models with Woodmac's data for more thorough market analysis

Insight into critical pipelines supplying and servicing key storage hubs, production basins & refineries

Be the first to know about major pipeline shutdowns, start-ups, and flow changes. With Woodmac's Mid-Continent Pipeline Service, traders and analysts can see, in near-real time, pipeline flows in and out of key storage hubs, production basins, and refineries.

Using its proprietary energy monitoring technology, aerial photography, and industry expertise, Woodmac provides indispensable fundamental data before any other provider in the market.

When bundled with the Cushing Crude Oil Storage Report, clients also receive a copy of the Cushing Balance Supplement Report, which includes analysis and discussion of pipeline flow dynamics as they pertain to Cushing storage inventories.

Designed for you

Traders

Trade grade differentials by assessing real-time utilisation rates on long haul pipelines from one region to another. Be the first to know about unplanned outages and duration of planned outages.

Analysts

Generate and maintain supply and demand balances by using pipeline flow data to track PADD to PADD movements or serve as a real-time proxy for regional production dynamics.

Finance Officers/Risk Managers

Assess financial positions with exposure to crude oil prices in real time. Mitigate risk by understanding potential supply and demand imbalances via pipeline flow data. Real-time pipeline flow data can provide insights and guidance for crude oil price hedging, crack spread hedging, and spot market activity and price hedging.

Independent/Integrated Oil Companies

Stay updated on pipeline assets and their utilisation rates throughout the Mid-Continent region. Assess the potential for regional bottle-necking or overbuilding as production and takeaway capacity dynamics evolve.
