

Product Overview

U.S. Gulf Coast Pipelines Report

Features:

- Insights delivered daily via email and available on-demand via the online dashboard
- Downloadable data with daily to half-hourly detail in Excel or CSV formats
- Flow measurements by pipeline for over 3.2 million barrels per day of capacity
- Regular intelligence reporting on construction, maintenance, and operational status of nine key pipelines
- Real-time email alerts on significant operational flow changes and market events

Benefits:

- Stay ahead by enhancing trading and research strategies
- Develop your own views on crude oil or refined products markets ahead of EIA data releases
- Compare flows and evaluate the impact of changes on the entire Gulf Coast region
- Use daily pipeline data to estimate changes in storage throughout the week
- Use Woodmac's granular flow data to feed in-house models

Gain real-time, proprietary insight into crude oil flows across the U.S. Gulf Coast region

Get real-time flow data and regular intelligence reports with new infrastructure developments in the region. With enormous infrastructure changes underway, the Gulf Coast is now widely recognized as the most important part of the U.S. crude oil market landscape.

Woodmac's U.S. Gulf Coast Pipelines report uses proprietary and patented technology and is unique in providing truly objective pipeline flow information in real-time. Real-time flow data and accurate information about regional oil infrastructure have become essential for all market participants.

By delivering critical insight into flows of crude oil along the main crude pipelines serving the region, subscribers gain a powerful tool to stay ahead of the competition and make informed, reliable trading decisions. With half-hourly flow updates by pipeline, real-time alerts, and downloadable datasets, this service enables traders, analysts, and other market participants to quickly assess and react to changes in the flow of crude across the increasingly important Gulf Coast region.

Real-time flow data for Magellan's 275,000 bpd Longhorn pipeline

Designed for you

Traders

Trade grade differentials by assessing real-time utilisation rates on long haul pipelines from one region to another. Be the first to know about unplanned outages and duration of planned outages.

Analysts

Generate and maintain supply and demand balances by using pipeline flow data to track PADD to PADD movements or serve as a real-time proxy for regional production dynamics.

Finance Officers/Risk Managers

Assess financial positions with exposure to crude oil prices in real time. Mitigate risk by understanding potential supply and demand imbalances via pipeline flow data. Real-time pipeline flow data can provide insights and guidance for crude oil price hedging, crack spread hedging, and spot market activity and price hedging.

Independent/Integrated Oil Companies

Stay in the know on pipeline assets and their utilisation rates throughout the Gulf Coast region, including key Permian takeaway pipelines. Assess the potential for regional bottle-necking or overbuilding as production and takeaway capacity dynamics evolve.
