

Product Overview

Rhine Oil Barge Report

An accurate picture of German refined product imports with weekly data & analysis

Features:

- Weekly commentary and analysis provides insights into observations of key trends and events
- Data on refined product flows from the ARA storage and refining hub to inland terminals in Germany
- Summary of seaborne cargoes discharged into German ports
- Detailed list of barges entering Germany each week

Benefits:

- Find efficiency and cost savings with this comprehensive weekly dataset and report
- Utilise Woodmac's breadth of proprietary data and trusted market intelligence to understand fluctuations in German demand
- Support investment and trading decisions in European refined products markets

For anyone with exposure to the refined products markets, particularly diesel and gasoil, it is valuable to have an accurate, up-to-date view of German demand levels and import volumes.

Woodmac's combination of industry expertise, AIS data, and proprietary storage data provide a comprehensive, weekly report of Rhine barge flows, broken down by refined product type, load terminals, and delivery areas. European gasoil and ULSD markets are particularly reactive to German demand.

Woodmac's weekly Rhine Oil Barge Report illuminates the flows of refined products into Germany via the Rhine. It also includes summaries of seaborne cargo imports from Woodmac's European Waterborne Products report, so that traders and analysts can better gauge total German refined product demand.

The report is produced using Woodmac's VesselTracker data, which boasts the most comprehensive and accurate data feed of global shipping, in order to follow barges loading up the Rhine to their final destinations.

By carefully monitoring each vessel using AIS technology, and referencing Woodmac's detailed intelligence on load and discharge terminals, we are able to accurately estimate true volumes of refined product flows to their final destination.

Regions covered:

The Rhine Oil Barge report and its data will refer to discharge regions which are standard terminology in the market:

- Lower Rhine
- Middle Rhine
- Upper Rhine
- High Rhine (Switzerland)

In addition, we refer to the main tributaries including:

- Wesel-Datteln Canal
- Ruhrgebiet - Rhine Herne Canal
- Ruhrgebiet - Ruhr
- Lahn
- Main
- Mosel
- Neckar
